SundayReview Flying Lessons From My Father

 **Brittany Bronson**

LAS VEGAS — BEFORE my first flight lesson, my father sat beside me in the small cockpit and told me the story of a flight instructor whose student stalled on descent, panicked and didn't release the controls. They both died in the crash.

"Some pilots won't teach for that reason," he continued. "They don't want to get killed."

I was 22, understandably nervous and calming my fears with a single thought: Nothing can go wrong in the presence of my experienced father, a charter pilot.

"Why would you tell me that right now?" I asked.

"It's something for you to think about."

And I did. The image of potentially killing my father removed much of the interest I had in his line of work.

In hindsight, I think it was a tale of caution, some spin on the "With great power comes great responsibility" notion. Crashes during flight instruction are rare, yet the warning fit my father's pattern of knocking down even the faintest signs of over-reliance on him. My mother died of brain cancer

My father has always displayed this impassive approach to death. He's had many brushes with it. As a reckless teenager he totaled his car.

Still today, the early death of a parent is considered a largely untreated psychological burden, despite the fact that one in seven Americans lose one before they turn 20, and carry it with them throughout their adulthood.

At 52, he lay alone in a parking lot and passed a blood clot through his heart. He developed Parkinson's a decade later. Now at 71, he is confronting prostate cancer.

My mother died of brain cancer when I was 4 and my sister and brother were 6; in the early years after her passing, our father advised us to be best friends, because, as he frequently reminded us, "I won't be around forever."

My father has always displayed this impassive approach to death. He's had many brushes with it. As a reckless teenager he totaled his car.

- Text:**

MANNHEIM, Germany — IF Giulia Enders had not contracted a mysterious illness as a teenager that left her covered with sores, she, like most of us, might never have thought much about her digestive tract, except when it was out of whack. She might never have enrolled in medical school, either, and she almost certainly would not have written a best-selling book about digestion last year that has captivated Germany, a nation viewed, fairly or not, as exceedingly anal-retentive.

Back in 2007, after a series of mostly ineffective treatments prescribed by doctors, Ms. Enders, then 17, decided to take matters into her own hands. Convinced that the illness was somehow associated with her

Back in 2007, after a series of mostly ineffective treatments prescribed by doctors, Ms. Enders, then 17, decided to take matters into her own hands. Convinced that the illness was somehow associated with her intestines, she pored over gastroenterological research, consumed probiotic bacterial cultures meant to aid digestion and tried out mineral supplements. The experiments worked (although she is not sure which one did the trick), leaving her with healthy skin and a newfound interest in her intestines. "I experienced with my own body that knowledge is power," she writes of the episode in "Gut: The Inside Story of Our Body's Most Underrated Organ," which was published in North America last month after its surprising success in Germany, where it has sold almost 1.5 million copies since its release in March 2014. Inspired by her successful self-experimentation, Ms. Enders enrolled in medical school in 2009 at Goethe University Frankfurt and is now working toward a doctoral degree in microbiology there.

6-18-2015 8:30 am...Napoleon has acquired a guide: Jean-Baptiste Decoster, a Flemish peasant who works at the Belle Alliance inn. His wife and children are hiding in the forest, but now he has been captured. He's hoisted onto a horse with his hands tied. "Your soldiers are destroying all my property," he protests. "I am Emperor," snaps Napoleon, "and can recompense you a hundred times as much." Women do not serve, but they're on the battlefield anyway. A huge train of wives and children follows the English army everywhere it goes. The wives do a lot of foraging, cooking and supplying, as well as retrieving wounded men from the battlefield. 6-18-2015 The Battle of The Universe...

6-18-2015 The Battle... Star Wars... How did the Stars Start H burning in 1,001 different ways???????????

6-18-2015 The Battle of Astronomers said Wednesday that they had discovered a lost generation of monster stars that ushered light into the universe after the Big Bang and jump-started the creation of the elements needed for planets and life before disappearing forever. Modern-day stars like our sun have a healthy mix of heavy elements, known as metals, but in the aftermath of the Big Bang only hydrogen, helium and small traces of lithium were available to make the first stars. Such stars could have been hundreds or thousands of times as massive as the sun, according to calculations, burning brightly and dying quickly, only 200 million years after the universe began. Their explosions would have spewed into space the elements that started the chain of thermonuclear reactions by which subsequent generations of stars have gradually enriched the cosmos with elements like oxygen, carbon and iron
