## Disorder Rules the Universe

'The Quantum Moment' Recounts the End of Determinism

FEB. 16, 2015

“On or about September 1927,” wrote the philosopher [Ray Monk](#), “the physical world changed.” Until then, according to Robert P. Crease and Alfred Scharff Goldhaber’s rich and entertaining new book, “The Quantum Moment,” we lived in a homogeneous, continuous, Newtonian world in which all objects moved seamlessly from the past to the future, governed by universal mathematical laws.

But in that fateful year, everything changed: Objects now follow different rules depending on their size, and we can never be sure where they are or what they are doing.

Yale Cross Campus Wednesday's XC | 2.18 By The Yale Daily News Remember that you are dust. Shifting gears from Mardi Gras yesterday, today is Ash Wednesday. Saint Mary's on Hillhouse Avenue and Saint Thomas More on Park Street will hold Mass and distribute ashes over the course of the day. Ash Wednesday comes the beginning of Lent, for which many students on campus will be making (small) sacrifices through Easter. Still, it could be a good opportunity for the non-religious to revisit their New Year's resolutions and see how far a little self-restraint can go.

Scholz's star currently lies 20 light years away - making it a fairly nearby system. But it showed very slow tangential motion for a star this close. This indicated that it was either moving away from us or towards a future close encounter with the Solar System. Scholz's star was not alone; it was accompanied on its travels by an object known as a brown dwarf. These are essentially failed stars that lacked the necessary mass to get fusion going in their cores. The findings are published in Astrophysical Journal Letters. 2-18-2015 2016, 2017, 2018, 2019, 2020... *That is how Dr. Michael Bennick, the medical director for patient experience at Yale-New Haven Hospital, solved a problem. He noticed a question on a Medicare survey asking, Is it quiet in your room at night? Maybe, Dr. Bennick thought, what is really being asked is: Can you get a good night's sleep without interruption? Is it really necessary to wake patients again and again to take blood pressure and pulse rates, to draw blood, to give medications? He issued instructions for his unit. No more routinely awakening patients for vital signs. And plan the timing of medications; outside intensive care units, three-quarters of drugs can be given before patients go to sleep and again in the morning. Then there were the blood tests. "Doctors love blood tests," Dr. Bennick said, and want results first thing in the morning when they make rounds. That meant waking patients in the wee hours. "I told the resident doctors in training: 'If you are waking patients at 4 in the morning for a blood test, there obviously is a clinical need. So I want to be woken, too, so I can find out what it is.' "* No one, he said, ever called him. Those middle-of-the-night blood draws vanished.

2-17-2015 How many There are 100 billion to 200 billion galaxies in the universe. Billions of galaxies have been observed, but only a very small number may hold the key to explaining much of cosmic history. These galaxies – which are far away, moving away fast and very old – are called “high-redshifted” galaxies, so named because they appear red due to the Doppler effect. People are excited about galaxies at high redshift ( $z > 6$ ) these 100 billion to 200 billion galaxies in the universe. The universe is expanding at an increasing rate, a finding that contradicts the laws of physics as they are currently understood, as one would expect gravity to make the universe’s expansion slow down. The work was published in the *Astrophysical Journal*. Yale professor of physics and study co-author, is a member – is focused on studying the light emitted by supernovae. Light that comes from supernovae that are moving away from the Earth to have a wavelength that is slightly longer than it would be otherwise. Fortunately, the light emitted by supernovae comes in only certain wave lengths, so by comparing data taken from actual supernovae to an idealized model, scientists can reason the velocity with which a supernova is moving toward or away from the Earth. This study figured out a way to make those velocity estimates better by comparing snapshot measurements to measurements taken over time.

positive emotions as an important ingredient for cooperation were not surprising. From an evolutionary perspective, positive emotions serve a special role in building and maintaining vital social bonds, she explained. These emotions are a critical piece of the glue that ties humans together and helps people survive in social communities, she added. In all the games, it was advantageous for each individual to keep as much money to himself, but it was better for the group if everyone decided to cooperate.

2-17-2015 Fools at the NY Times Health report on "World Wide Accidents - Not gasoline cars, Not Poison Gasoline Exhaust!" Fatal Accidents as a Global Health Crisis" by Jeremy N. Smith NY Times Worried about what to worry about? Accidents should move higher up your list. Worldwide, road injuries kill more people than AIDS. Falls kill nearly three times as many people as brain cancer. Drowning claims more lives than mothers dying in childbirth. Both fire and poisoning have many times more fatal victims than natural disasters. In 2013, the combined death toll from all unintentional injuries was 3.5 million people. Only heart disease and stroke were greater killers. "World Wide Accidents - Not gasoline cars, Not Poison Gasoline Exhaust!" Fatal Accidents as a Global Health Crisis" by Jeremy N. Smith NY Times 1 Billion Dead from Holocaust II and counting... same as "OJ" killing another 19K SWF in 2016 + 2017.
