The Black Death II... Stage 4 Breast Cancer

The Holocaust II... Poison Gasoline Exhaust

2-24-2015 Scenarios from Greg + Wives when we get to Los Alamos... The Black Death, which originated in Asia, arrived in Europe in 1347 and caused one of the deadliest outbreaks in human history. Over the next 400 years, epidemics broke out again and again, killing millions of people. Bill Gates and the General Electric chief Jeffrey R. Immelt, set up... Black Obama to be the "FALL GUY" for Black Death II prohibiting Greg + Wives in Key West from talking, brainstorming a cure for breast cancer out of spite for SWF... HOLOCAUST II the Poison Gasoline Exhaust mass murder of hundreds of millions and trillions of birth defects in Children! The Black Death II as Obama could have LEAKED the suppression of the 1980 to 2015 Electric Windmill Ford Escort but instead Obama was part of the GANG, they held up GAS Stations and sucker punched SWF out of spite! A Hate Crime! \$777 Trillion! Black Death II - - - Black rats may not have been to blame for numerous outbreaks of the bubonic plague across Europe, a study suggests. Scientists believe repeat epidemics of the Black Death, which arrived in Europe in the mid-14th Century, instead trace back to gerbils from Asia.

2-24-2015 Scenarios from the Renaissance contain little other than character names, brief descriptions of action, and references to specific lazzi with no further explanation. It is believed that a scenario formed the basis for a fully improvisational performance.

2-24-2015 Scenarios from Greg + Wives... Panobinostat was able to selectively target triple negative breast cancer (TNBC) cells by inducing hyperacetylation and cell cycle arrest at the G2-M DNA damage checkpoint, partially reversing the morphological changes characteristic of breast cancer cells.

2-24-2015 Scenarios from Greg + Wives... Panobinostat has been found to synergistically act with sirolimus to kill pancreatic cancer cells in the laboratory in a Mayo Clinic study. In the study, investigators found that this combination destroyed up to 65 percent of cultured pancreatic tumor cells. The finding is significant because the three cell lines studied were all resistant to the effects of chemotherapy - as are many pancreatic tumors.

When freed 1,001 Invention Projects on a CD and my web page

2-24-2015 Scenarios from Greg + Wives... Mechanism of action... Panobinostat inhibits multiple histone deacetylase enzymes, a mechanism leading to apoptosis of malignant cells via multiple pathways,

2-24-2015 Scenarios from Greg + Wives... β -Lactam antibiotics "penicillin" inhibit the formation of peptidoglycan cross-links in the bacterial cell wall; this is achieved through binding of the four-membered β -lactam ring of penicillin to the enzyme DD-transpeptidase. As a consequence, DD-transpeptidase cannot catalyze formation of these cross-links, and an imbalance between cell wall production and degradation develops, causing the cell to rapidly die.

When freed 1,001 Invention Projects on a CD and my web page

2-24-2015 Scenarios from Greg + Wives... "Penicillin" puts a hole in the Gram-negative bacteria. The thin peptidoglycan layer of their cell wall is sandwiched between an inner cell membrane and a bacterial outer membrane. Penicillin puts a hole in their cell wall causing the cell to rapidly die.

2-24-2015 Scenarios from Greg + Wives... The term "penicillin" is often used generically to refer to benzylpenicillin (penicillin G), procaine benzylpenicillin (procaine penicillin), benzathine benzylpenicillin (benzathine penicillin), and phenoxymethylpenicillin (penicillin V). Procaine penicillin and benzathine penicillin have the same antibacterial activity as benzylpenicillin but act for a longer period of time. Phenoxymethylpenicillin is less active against gram-negative bacteria than benzylpenicillin. [2] [3] Benzylpenicillin, procaine penicillin and benzathine penicillin are given by injection (parenterally), but

phenoxymethylpenicillin is given orally

2-24-2015 Scenarios from Greg + Wives... Novartis blood cancer drug Panobinostat wins you 6 months Swiss drugmaker Novartis approval is for use of the panobinostat in patients with relapsed multiple myeloma who have received at least two prior standard therapies, including bortezomib (Velcade, Millennium) and an immunomodulatory agent. Panobinostat is approved for use in combination with bortezomib and dexamethasone. The drug is a first in a new class of agents that act as inhibitors of histone deacetylases.

2-24-2015 Scenarios from Greg + Wives... "Panobinostat has a new mechanism of action that distinguishes it from prior drugs approved to treat multiple myeloma, making it a potentially attractive candidate agent," said Richard Pazdur, MD, director of the Office of Hematology and Oncology Products in the FDA's Center for Drug Evaluation and Research Panobinostat carries a boxed warning alerting patients and healthcare professionals that severe diarrhea and severe and fatal cardiac events, arrhythmias, and electrocardiogram changes. Approval is part of the FDA's accelerated approval program.

It's called the Bourbon virus, and sadly, it has nothing to do with delicious amber liquids and everything to do with dying. Neuronetrix, a local firm, landed FDA clearance for its COGNISION system. It's used to detect brainwave markers that point to the existence of certain neurological diseases, by producing quantitative electroencephalography (qEEG) and event-related potential (ERP) data processed by the company's online server. Results from the system are compared to data from previous studies of qEEG/ERP to classify patients based on their characteristic brainwave patterns. The hope is that this technology will serve as a useful modality for diagnosing a variety of Bourbon 801 Movie making scenes!!
