4-15-14 Passover - Exodus 2014 "Star Travel" Exodus via Ten
Invention Projects, 1. Gravity Engine 2. Observe Aliens 3.
Eavesdrop, overhear Aliens... while the 4th, 5th, 6th, 7th, and
9th did not affect the children of Israel...

4-15-14 Yale News - Menu Not From Yale Key West Medical
School Students... story of "The Plague, High Tech, way over
the HEADS of "West Point" Cadets... IQ's... Mary B. will really
make this movie on the Plague Over their heads... read the
story of the Plague down below the Picture of Officer Jason! I
just added the Flesh Eating Bacteria below this one and
though someone, maybe the guy in Colorado who got the
Scam Nobel in Physics caught it at the University Hospital
Starbucks when someone brought a cup of Starbucks to him
in his hospital room... grin. flesh-eating culprit in question
is called GAS, or Group A β -hemolytic streptococcus, a highly
infective bacteria. Apart from causing the flesh-eating
disease necrotizing fasciitis.

4-15-14 Hero Mary B. another "Gravity Engine Era Movie"
about the flesh eating bacteria that is in the news every now
and then but never made into a Disney Movie... Carnival
Magic Ship just docked in front of me... Disney Magic is the

same Magic Name but on a Disney Ship... now we need to talk Disney into making "A Flesh Eating Bacteria Movie" based on the article I will paste below the Plague article, and produce the movie so its Over the IQ heads of West Point Cadets but not New Med Students at Yale Key West Medical School... grin!

4-15-14 Yale News - Menu Not From Yale Key West Medical School Students... Mecca "Dumpster Diving."

4-15-14 Exodus... IRS Whistleblowers Rewards for Jewish Key West Landlords paying everyone in CASH... \$ God rewarding the "Slave Renters" from a Jewish Sinner! MD Whistleblower for the Landlords Irritable Bowel + Hepatitis... etc I Was "disease" Profiled... Profiles supplied by Yale Key West Medical School.

4-15-14 Yale News - Menu Not From Yale Key West Medical School Students... Starbucks Menu!

4-15-14 Flu 62% 84% infected at a NY Starbucks... not in the New York flu statistics here just the vaccine not how many caught the flu at a Starbucks in New York....

4-15-14 The NY Health Department announced that during the first week of April, there were 648 cases of influenza counted at hospitals. Overall, there were 2,500 confirmed cases of the flu throughout the entire state within that same week. According to the officials, the recent cases are caused by a type of influenza B virus. The strain that affected many young adults during the winter season was H1N1, which is a type of influenza A virus. Even though the strains are different, the vaccine is still the best form of protection. NO... Best Protection would be the New York Health Dept keeping Starbucks Employees home when they have the flu, now they come to work sick with the flu...

4-15-14 Flu Death Toll Mounts To 302 in California This Year... 100 die from Starbucks not scanning everyone who comes to work with the flu... a crime by the BMF George Orwell who is 1 Trillion light years from being Dr. George Orwell.

4-15-14 During the winter season, H1N1 hospitalized over 8,000 people. Over 60 percent of the cases were in adults between the ages of 18 and 64. Medical experts stated that due to prior exposure to H1N1, which was behind the 2009 worldwide pandemic, and the effectiveness of this year's vaccine, H1N1 did not become a global threat. According to Dr. Michael Jung, a medical officer from the U.S. Centers for Disease Control and Prevention's (CDC) influenza division, this year's flu vaccine cut people's risk of getting the flu by 62 percent. ...

4-15-14 Video surveillance at Starbucks... next... research, grin. Researchers pioneer use of video surveillance to better understand essential hygiene behavior (Medical Xpress) – One of the best defenses against infectious disease is one of the most simple - hand washing, don't go to work at Starbucks sick! Drink coffee at the espresso machine, Greg has caught them at Starbucks in Key West!

4-15-14 "Just Like A Woman!" true to the stereotype... Susan Hughes, Ph.D., suggests that men cannot intentionally make their voices sound more sexy or attractive, while women have little trouble. And true to the stereotype, women will lower their pitch and increase their hoarseness to dial up the allure. Allure to Inspire you to Invent Something will be a "New Universe for Women" who desire the "Gravity Engine Era!"

4-15-14 Hero Mary B. another "Gravity Engine Era Movie" about the flesh eating bacteria that is in the news every now and then but never made into a Disney Movie... Carnival Magic Ship just docked in front of me... Disney Magic is the same Magic Name but on a Disney Ship... now we need to talk Disney into making "A Flesh Eating Bacteria Movie" based on the article I will paste below the Plague article, and produce the movie so its Over the IQ heads of West Point Cadets but not New Med Students at Yale Key West Medical School... grin!

4-15-14 Hero Mary B. will get... Oscar for... the movie of Officer Jason. Mecca's Fire Bombing of Cop Cars... for \$4 gas. NY Times will get a ticket for lying to a "Cop!" Hero Mary B. will get... Oscar for... next movie too, story of "The Plague High Tech over "West Point" Cadets IQ's... Mary B. will really make this movie on the Plague Over their heads... read the story of the Plague down below the Picture of Officer Jason!

Managing pain in burn victims, 1,001 Cops in Paris, Rome, LA, Moscow... article... <http://www.medgadget.com/> MD's who never write a article on "Burn Victims" Cops!

...she would have had a cardiac arrest when Greg got the "Serendipity" cure in front of 1 Trillion "Observers" watching!

When freed 1,001 Invention Projects on a CD and my web page

...'aha moment' came when we saw Fas ligand on the list of affected proteins, because we know Fas is an integral receptor for controlling cell death

When freed 1,001 Invention Projects on a CD and my web page

Northwestern Medicine scientists are continuing to unravel the molecular changes that underlie one of the world's deadliest and most infamous respiratory infections.

When freed 1,001 Invention Projects on a CD and my web page

*When the bacterium *Yersinia pestis* enters the lungs, it causes*

*pneumonic plague, a disease that is 100 percent fatal if untreated. The way in which *Y. pestis* evades the immune system and kills people in a matter of days has largely confounded scientists, until now.*

When freed 1,001 Invention Projects on a CD and my web page

*Following a 2007 study demonstrating that the presence of a protein called the plasminogen activator protease (Pla) is required for *Y. pestis* to live inside the lungs, Wyndham Lathem, PhD, assistant professor in Microbiology-Immunology, has found what role Pla plays during disease.*

When freed 1,001 Invention Projects on a CD and my web page

*The activator shuts down a molecule, Fas ligand (FasL), which stimulates a form of programmed cell death known as apoptosis. The result is a disrupted immune response during infection. This allows *Y. pestis* to overwhelm the lungs, causing death.*

When freed 1,001 Invention Projects on a CD and my web page

"This is the first time anyone has shown how bacteria can subvert apoptotic cell death by directly destroying Fas ligand," said Lathem, a member of the Center for Genetic Medicine and Interdepartmental Immunobiology Center.

When freed 1,001 Invention Projects on a CD and my web page

*The findings were published April 9 in *Cell Host & Microbe*.*

When freed 1,001 Invention Projects on a CD and my web page

To study its effects, scientists added Pla to glass slides with various fluorescently-tagged proteins. If the protease showed an affinity for a specific protein, it would chew off pieces,

making it appear less florescent when viewed under a microscope.

When freed 1,001 Invention Projects on a CD and my web page

"We knew that Pla must be chopping up host proteins in some manner and we looked to discover exactly what proteins were being affected," said first author Adam Caulfield, a research associate in Lathem's lab.

When freed 1,001 Invention Projects on a CD and my web page

"As we reviewed possible hits, the 'aha moment' came when we saw Fas ligand on the list of affected proteins, because we know Fas is an integral receptor for controlling cell death," said Lathem. "The process of Pla degrading Fas ligand effectively prevents the lungs from being able to clear the infection."

When freed 1,001 Invention Projects on a CD and my web page

After verifying their findings using cell cultures, Lathem conducted preclinical tests using mice, arriving at the same conclusion.

When freed 1,001 Invention Projects on a CD and my web page

"Now that we have identified this as a method by which plague bacteria can manipulate the immune system, we have something to look for when studying other respiratory infections," Lathem said. "This could be a common feature, where we see other bacteria manipulating cell death pathways by altering Fas signaling."

When freed 1,001 Invention Projects on a CD and my web page

Pneumonic plague is unique in that it is the only type of

plague with an ability to spread from person to person. It is treatable if caught early, but after 24 hours, antibiotics are rendered useless.

When freed 1,001 Invention Projects on a CD and my web page

Lathem believes that a restoration of Fas signaling may give antibiotics more time to work, and scientists in his lab are exploring that possibility. They will also be looking at different bacterial infections to see if any manipulate cell death by altering Fas signaling in a similar manner.

Bacterial diseases cause millions of deaths every year. Most of these bacteria were benign at some point in their evolutionary past, and we don't always understand what turned them into disease-causing pathogens. In a new study, researchers have tracked down when this switch happened in one flesh-eating bacteria. They think the knowledge might help predict future epidemics.

When freed 1,001 Invention Projects on a CD and my web page

The flesh-eating culprit in question is called GAS, or Group A β -hemolytic streptococcus, a highly infective bacteria. Apart from causing the flesh-eating disease necrotizing fasciitis, GAS is also responsible for a range of less harmful infections. It affects more than 600 million people every year, and it causes an estimated 500,000 deaths.

When freed 1,001 Invention Projects on a CD and my web page

These bacteria appeared to have affected humans since the 1980s. Scientists think that GAS must have evolved from a less harmful streptococcus strain. The new study, published in PNAS, reconstructs that evolutionary history.

When freed 1,001 Invention Projects on a CD and my web page

Lead researcher James Musser of the Methodist Hospital Research Institute said, "This is the first time we have been able to pull back the curtain to reveal the mysterious processes that gives rise to a virulent pathogen."

When freed 1,001 Invention Projects on a CD and my web page

Genetic gymnastics

When freed 1,001 Invention Projects on a CD and my web page

Musser's work required analysis of the bacterial genetic data from across the world—a total of about 3,600 streptococcus strains were collected and their genomes recorded. The study revealed that a series of distinct genetic events turned this bacteria rogue.

When freed 1,001 Invention Projects on a CD and my web page

First, foreign DNA moved into the original harmless streptococcus by horizontal gene transfer—a phenomenon that is common among bacteria. Such DNA is often provided by bacteriophages, viruses that specifically target bacteria. Picking up foreign genes can be useful because it can improve the bacteria's survival.

When freed 1,001 Invention Projects on a CD and my web page

In this case, the foreign DNA that was incorporated into the host's genome allowed the streptococcus cell to produce two harmful toxins. A further mutation to one of these toxin genes made it even more virulent.

When freed 1,001 Invention Projects on a CD and my web page

According to Musser, another horizontal gene transfer event made a good disease-causing pathogen into a very good

one. The additional set of genes allowed it to produce proteins that suppress the immune system of those infected, making the infection worse.

When freed 1,001 Invention Projects on a CD and my web page

Marco Oggioni of the University of Leicester said, "Because this study used data of the entire genome, all the genetic change could be observed. This makes it possible to identify molecular events responsible for virulence, as you get the full picture."

When freed 1,001 Invention Projects on a CD and my web page

Musser could also accurately date the genetic changes in GAS by using statistical models to turn back the clock on evolution. They say the last genetic change, which made GAS a highly virulent bacteria, must have occurred in 1983.

When freed 1,001 Invention Projects on a CD and my web page

Continental drift

When freed 1,001 Invention Projects on a CD and my web page

That timing makes a lot of sense. "The date we deduced coincided with numerous mentions of streptococcus epidemics in the literature," Musser said. Since 1983, there have been several outbreaks of streptococcus infections across the world. For example, in the UK, streptococcus infections increased in number and severity between 1983 and 1985.

When freed 1,001 Invention Projects on a CD and my web page

It's the same story for many other countries, with Sweden, Norway, Canada, and Australia falling victim to what is now an intercontinental epidemic. The symptoms ranged

from pharyngitis to the flesh-eating disease, necrotizing fasciitis.

When freed 1,001 Invention Projects on a CD and my web page

“In the short term, this discovery will help us determine the pattern of genetic change within a bacteria, and may help us work out how often bacterial vaccines need to be updated,” Musser said. *“In the long term, this technique may have an important predictive application—we may be able to nip epidemics in the bud before they even start.”*

When freed 1,001 Invention Projects on a CD and my web page

What Musser is suggesting is that if enough bacterial genomes are regularly recorded and monitored, there is a chance that mutations or gene transfers, such as those GAS experienced, could be found ahead of time.

When freed 1,001 Invention Projects on a CD and my web page

But Oggioni is skeptical. “While making such predictions may not be possible, this research will have other applications,” he said. *“Knowing which genetic changes happen when can help tailor drug discovery research in a certain direction.”*

When freed 1,001 Invention Projects on a CD and my web page

Oggioni added that Musser’s work with GAS is only a model. Using Musser’s methods to record the evolutionary histories of other pathogens could be quite useful to tackle the diseases they cause now—and perhaps even those they may cause in the future. The Conversation
