5-16-14 Women MD Alerts You... RCT Ventures has just
announced a new opportunity for early-stage medical
device companies: the 2014 MedTech Innovator competition.
Companies and university-stage teams are encouraged to
apply. Ten semi-finalists will be selected by a panel of
medical device venture capitalists that will receive free

registration to the Wilson Sonsini Medical Device conference. There, a live audience will select the winner, who will receive the \$100k grand prize. RCT Ventures' last contest, Medtech Idol, had a fascinating array of gadgety competition with Aventamed's impressive ear-tube placement device coming out on top. When asked about the competition, Paul Grand, Managing Director for RCT Ventures said, "In today's lean start-up model, the \$100k prize should be enough to allow the winner to bridge the funding gap and achieve a milestone that can help them secure a larger funding round or critical industry partnership." 4 MD Wives Coup D'Etat PARTNERSHIP not these "1984" Male MD's who wrote this Innovator competition News as they work for Hitler, our Oil Holocaust Numb Nuts Dictator who has \$777 Trillion for Health Care you will spent when MD women walk down LOVE LANE!

Instill thinking about starting the conversation about what needs to be invented or reinvented. Flame retardant chemicals are known to cause hormone imbalance and lowered IQ in young children. A survey of 40 preschools found that these chemicals are present in many day care centers.

Polybrominated diphenyl ethers or PBDEs, are organobromine compounds that are used as flame retardant. Like other brominated flame retardants, PBDEs have been used in a wide array of products, including building materials, electronics, furnishings, motor vehicles, airplanes, plastics, polyurethane foams, [1] and textiles. They are structurally akin to the PCBs and other polyhalogenated compounds, consisting of two halogenated aromatic rings. PBDEs are classified according to the average number of bromine atoms in the molecule. The health hazards of these chemicals have attracted increasing scrutiny, and they have been shown to reduce fertility in humans at levels found in households. [2] Their chlorine analogs are polychlorinated diphenyl ethers (PCDEs). Because of their toxicity and persistence, the industrial production of some PBDEs is restricted under the Stockholm Convention, a treaty to control and phase out major persistent organic pollutants (POPs). random access molecular diagnostics system, the VERIS MDx, at the European Conference on Clinical Microbiology and Infectious Diseases (ECCMID) in Barcelona this week. The VERIS MDx system and VERIS CMV assay received CE mark earlier this year. The system offers automated nucleic acid extraction, purification, amplification, and detection. It accepts several sample containers for plasma, serum and culture tubes. 48 samples can be lined up on 12 racks of 4 samples each. The time to result for DNA tests is around 70 minutes and for RNA tests a little longer, around 100 minutes, because PCR amplification only works on DNA and therefore you must reverse-transcribe to cDNA first. For multiplex analysis five different detection colors available with a bandwidth of 505 to 720 nm. The onboard capacity consists of 96 extraction and purification cartridges and reagents are covered for 20 assays with 48 tests per assay. Reagents are stable in the machine for up to 14 days. 5-16-14 Women MD alert you... "Cops Arrest You!" Key West Citizen Front Page Officer Jason Burned with wife + baby, NO WAY! Instilled from the get-go... Harvard's Wyss Institute developed a nanoparticle that mimics a virus, which the immune system ignores, while carrying a DNA payload inside. They essentially replicated the external casing that a real virus uses to protect its own genome. They put a layer of phospholipid around their DNA nanodevices, which were initially folded into octahedrons. The phospholipids were attached to the DNA by adding spots to the genetic material where the lipids could grab on. This then created a foundation for forming a complete bilayer membrane around the DNA payload, which resulted in particles that successfully evade the immune system.
