CHEERLEADING CHANTS going for 1 million SWF to become  
MD's...

Revolution around the sun... Travel to the Nearest 52 Stars  
Revolution! Date is... Speed is...

Revolution of the ElectricWindmillFord Escort... ...Gravity  
Engine Invention!

In 2014, the solstice falls on June 21 at 6:51 A.M. EDT. The  
orbital speed of the Earth around the Sun averages about 30  
km/s (108,000 km/h, or 67,108 mph) As viewed from the  
North Star or polestar Polaris, the Earth turns counter-  
clockwise. Rotation equatorial speed of 465.1 m/s, 1,674.4  
km/h or 1,040.4 mi/h.

6-20-14 "700th fiery Cop Car Crash was reported last night"  
by ROD NORDLAN NY Times!

*6-20-14 "How an iPhone Update Lowered New York City's Crime Rate" by Joshua Brustein*

*6-2014 "How an Invention Project via Greg + Wives in Key West got the 100 Day Batter for iPhones, MacBook Air + MacBook Pro... by ROD NORDLAN NY Times! An iOS device repair company in the UK reports third-party charging accessories are causing damage to a critical power management component in Apple's iPhone 5, rendering the handset inoperable.*

*6-20-14 "How an iPhone Update" Apple's iPhones now allow owners to erase data remotely, even if the devices are stolen—a feature that will never generate the excitement of GPS by CIA Trackers out to "Kill with their FBI Swat Team Buddies" who ever took your iPhone in NYC!*

*6-20-14 "How an iPhone Update" GPS for Stolen iPhones....*

*6-20-14 "How an iPhone Update" GPS for Stolen iPhones.... New York's attorney general credits the iPhone's new "kill switch" for a seemingly impossible achievement: lowering crime rates in the country's largest city.*

*6-20-14 "How an iPhone Update" GPS for Stolen iPhones....*

*6-20-14 "How an iPhone Update" GPS for Stolen iPhones.... Apple's introduction of the kill switch has indeed affected the market for stolen phones, says Paul Iliya of phone reseller iCracked. His company checks each of the phones it purchases against a database of stolen devices and rejects those linked to theft. In the past few months, he says, the percentage of flagged Apple devices has dropped noticeably.*

*6-20-14 "How an iPhone Update" GPS for Stolen iPhones.... But that doesn't mean no one wants stolen iPhones. iCracked sells many of its phones to overseas buyers. Recently, Iliya says, some buyers have been sending the company two sets of*

prices—one for unlocked phones and another for those crippled by the Activation Lock. "There is still a market for them," he says of the locked phones, "but they're paying 60 percent to 70 percent less." Iliya figures the locked iPhones are sold for spare parts.

6-20-14 "How an iPhone Update" GPS for Stolen iPhones.... Not always. Jay Davies, a New York photo editor (and, full disclosure, someone who attended my wedding), lost his phone in a cab in Manhattan last December. Three months later a man from Pakistan contacted him. The man had bought an iPhone for 23,500 Pakistani rupees—about \$230—that was locked and displaying Davies's e-mail address. Would Davies be kind enough to unlock the phone? "I wouldn't ask him to eat \$230, even if it's his fault for buying a locked iPhone," says Davies. "But I'll be damned if I'm releasing it."

6-20-14 "How an iPhone Update" GPS for Stolen iPhones....

6-20-14 iPad app for "Start of Star Wars Revolution!" "Star Wars" fanatics can relive their love of the original trilogy in an entirely new way on Apple's iPad thanks to the new "Star Wars Scene Maker" app from Disney, which allows users to re-imagine and re-create scenes from the films.

6-20-14 "Witch's Burned at Salem, Massachusetts" Apple's much-ballyhooed sapphire plant in Arizona is not its only production facility for the crystalline material, according to a new regulatory filing from manufacturing partner GT Advanced Technologies, as the two companies have also opened a secondary location in Salem, Mass.

6-18-14 9/11 II... Mossad informed the FBI and CIA in August 2001 that based on its intelligence as many as 200 terrorists were slipping into the United States and planning "a major assault on the United States." The Israeli intelligence agency cautioned the FBI that it had picked up indications of a "large-scale target" in the United States and that Americans would be "very vulnerable." [9] However, "It is not known whether U.S. authorities thought the warning to be credible, or whether it contained enough details to allow counter-terrorism teams to come up with a response," [10] A month later, terrorists struck at the World Trade Center and the Pentagon. [9]

A major advance towards acquiring this knowledge has been reported by a team of researchers with the U.S. Department of Energy (DOE)'s Lawrence Berkeley National Laboratory (Berkeley Lab) and the University of California (UC) Berkeley. Dynamic Spectroscopy Duo: 2D Electronic-Vibrational Spectroscopy Technique Provides Unprecedented Look into Photochemical Reaction From allowing our eyes to see, to enabling green plants to harvest energy from the sun, photochemical reactions - reactions triggered by light - are both ubiquitous and critical to nature. Photochemical reactions also play essential roles in high technology, from the creation of new nanomaterials to the development of more efficient solar*

energy systems. Using photochemical reactions to our best advantage requires a deep understanding of the interplay between the electrons and atomic nuclei within a molecular system after that system has been excited by light. A major advance towards acquiring this knowledge has been reported by a team of researchers with the U.S. Department of Energy (DOE)'s Lawrence Berkeley National Laboratory (Berkeley Lab) and the University of California (UC) Berkeley. Graham Fleming, UC Berkeley's Vice Chancellor for Research and a faculty senior scientist with Berkeley Lab's Physical Biosciences Division, led the development of a new experimental technique called two-dimensional electronic-vibrational spectroscopy (2D-EV). By combining the advantages of two well-established spectroscopy technologies - 2D-electronic and 2D-infrared - this technique is the first that can be used to simultaneously monitor electronic and molecular dynamics on a femtosecond (millionth of a billionth of a second) time-scale. The results show how the coupling of electronic states and nuclear vibrations affect the outcome of photochemical reactions. "We think that 2D-EV, by providing unprecedented details about photochemical reaction dynamics, has the potential to answer many currently inaccessible questions about photochemical and photobiological systems," says Fleming, a physical chemist and internationally acclaimed leader in spectroscopic studies of events that take place on the femtosecond time-scale. "We anticipate its adoption by leading laboratories across the globe," Fleming is the corresponding author of a paper in the Proceedings of the National Academy of Sciences (PNAS) titled "Correlating the motion of electrons and nuclei with two-dimensional electronic-vibrational spectroscopy." Co-authors are Thomas Oliver and Nicholas Lewis, both members of Fleming's research group. Fleming and his research group were one of the key developers of 2D electronic spectroscopy (2D-ES), which enables scientists to follow the flow of light-induced excitation energy through molecular systems with femtosecond temporal resolution. Since its introduction in 2007, 2D-ES has become an essential tool for investigating the electronic relaxation and energy transfer dynamics of molecules, molecular systems and nanomaterials following photoexcitation. 2D infrared spectroscopy is the go-to tool for studying nuclear vibrational couplings and ground-state structures of chemical and complex biological systems. "Combining these two techniques into 2D-EV tells us how photoexcitation affects the coupling of electronic and vibrational degrees of freedom," says Oliver. "This coupling is essential to understanding how all molecules, molecular

systems and nanomaterials function." In 2D-EV, a sample is sequentially flashed with three femtosecond pulses of laser light. The first two pulses are visible light that create excited electronic states in the sample. The third pulse is mid-infrared light that probes the vibrational quantum state of the excited system. This unique combination of visible excitation and mid-infrared probe pulses enables researchers to correlate the initial electronic absorption of light with the subsequent evolution of nuclear vibrations. "2D-EV's ability to correlate the initial excitation of the electronic-vibrational manifold with the subsequent evolution of high-frequency vibrational modes, which until now have not been explored, opens many potential avenues of fruitful study, especially in systems where electronic-vibrational coupling is important to the functionality of a system," Fleming says. As a demonstration, Oliver, Lewis and Fleming used their 2D-EV spectroscopy technique to study the excited-state relaxation dynamics of DCM dye dissolved in a deuterated solvent. DCM is considered a model "push-pull" emitter - meaning it contains both electron donor and acceptor groups - but with a long-standing question as to how it fluoresces back to the ground energy state. "From 2D-EV spectra, we elucidate a ballistic mechanism on the excited state potential energy surface whereby molecules are almost instantaneously projected uphill in energy toward a transition state between locally excited and charge-transfer states before emission," Oliver says. "The underlying electronic dynamics, which occur on the hundreds of femtoseconds time-scale, drive the far slower ensuing nuclear motions on the excited state potential surface, and serve as an excellent illustration for the unprecedented detail that 2D-EV will afford to photochemical reaction dynamics." One example of how 2D-EV might be applied is in the study of rhodopsin, the pigment protein in the retina of the eye that is the primary light detector for vision, and carotenoids, the family of pigment proteins, such as chlorophyll, found in green plants and certain bacteria that absorb light for photosynthesis. "The nonradiative energy transfer in rhodopsin and carotenoids is thought to involve the breakdown of one of the most widely used approximations of quantum mechanics, the Born-Oppenheimer approximation, which states that since motion of electrons are far faster than nuclei, as represented by vibrational motion, the nuclei respond to changes in electronic states," Oliver says. "With 2D-EV, we will be able to directly correlate the degrees of electronic and vibrational freedom and track their evolution as a function of time. It's a chicken and egg kind of problem: Do the electrons or

nuclei move first? 2D-EV will give us insight into whether or not the Born-Oppenheimer approximation is still valid in these cases." For nanomaterials, 2D-EV should be able to shed much needed light on how the coupling of phonons - atomic soundwaves - with electrons impacts the properties of carbon nanotubes and other nanosystems. 2D-EV can also be used to investigate the barriers to electron transfer between donor and acceptor states in photovoltaic systems. "We are continuing to refine the 2D-EV technology and make it more widely applicable so that it can be used to study lower frequency motions that are of great scientific interest," Oliver says.

6-17-14 iApp for 1984 Neurologists who are MD's and know about Poison Gas Exhaust is Holocaust II A clinical trial involving nearly 300 Chinese men and women residing in one of China's most polluted regions found that daily consumption of a half cup of broccoli sprout beverage produced rapid, significant and sustained higher levels of excretion of benzene, a known human carcinogen, and acrolein, a lung irritant. Researchers from the Johns Hopkins Bloomberg School of Public Health, working with colleagues at several U.S. and Chinese institutions, used the broccoli sprout beverage to provide sulforaphane, a plant compound already demonstrated to have cancer preventive properties in animal studies. The study was published in the June 9 online edition of the journal Cancer Prevention Research.
