"10 Things to Know About the iPhone5s Kill Switch" Why is it needed? -- In the last few years, the number of violent thefts of smartphones on the streets of major U.S. cities has been rising. Some estimates say 1 in 3 thefts in the U.S. involve a smartphone. Thieves snatch phones from the hands of victims as they walk down the street or sit on public transport and then dart away. A sizeable portion of crimes involve people being threatened with knives or guns, or victims are assaulted.

6-26-14 Descartes and Locke have struggled to comprehend the nature of consciousness and pin down its essential properties. Issues of concern in the philosophy of consciousness include whether the concept is fundamentally coherent; whether consciousness can ever be explained mechanistically;

6-26-14 Asclepius (/æskliːpiːs/; Greek: ἄσκληπιός, Asklepiós [asklɛˈpiós]; Latin: Aesculapius) was a god of medicine and healing in ancient Greek religion. Asclepius represents the healing aspect of the medical arts; his daughters are Hygieia ("Hygiene", the goddess/personification of health, cleanliness, and sanitation), Iaso (the goddess of recuperation from illness), Aceso (the goddess of the healing process), Aglaea/Egle (the goddess of beauty, splendor, glory, magnificence, and adornment), and Panacea (the goddess of universal remedy). He was associated with the Roman/Etruscan god Veiovis. He was one of Apollo's sons, sharing with Apollo the epithet Paean ("the Healer"). [1] The rod of Asclepius, a snake-entwined staff, remains a symbol of medicine today. Those physicians and attendants who served this god were known as the Therapeutae of Asclepius.

Image-guided radiation therapy (IGRT) is the process of frequent two and three-dimensional imaging, during a course of radiation treatment, used to direct radiation therapy utilizing the imaging coordinates of the actual radiation treatment plan. [1] The patient is localized in the treatment room in the same position as planned from the reference imaging dataset. An example of IGRT would include localization of a cone-beam computed tomography (CBCT) dataset with the planning computed tomography (CT) dataset from planning. IGRT would also include matching planar kilovoltage (kV) radiographs or megavoltage (MV) images with digital reconstructed radiographs (DRRs) from the planning CT. These two methods comprise the bulk of IGRT strategies!

6-25-14 "Human Consciousness" Epilepsy (from the Ancient Greek verb $\epsilon\pi\iota\lambda\eta\psi\omega$ meaning "to seize, possess, or afflict") [1] is a group of long-term neurological disorders characterized by epileptic seizures. [2] These seizures are episodes that can vary from brief and nearly undetectable to long periods of vigorous shaking. [3] In epilepsy, seizures tend to recur, and have no immediate underlying cause [2] while seizures that occur due to a specific cause are not deemed to represent epilepsy. [4] In most cases the cause is unknown, although some people develop epilepsy as the result of brain injury, stroke, brain cancer, and drug and alcohol misuse, among others. Epileptic seizures are the result of excessive and abnormal cortical nerve cell activity in the brain. [4] The diagnosis typically involves ruling out other conditions that might cause similar symptoms (such as syncope) as well as figuring out whether any immediate causes are present. Epilepsy can often be confirmed with an electroencephalogram (EEG).

6-25-14 "Human Consciousness" Epilepsy cannot be cured, but seizures are controllable with medication in about 70% of cases. [5] In those whose seizures do not respond to medication, surgery, neurostimulation or dietary changes may be considered. Not all cases of epilepsy are lifelong, and a substantial number of people improve to the point that medication is no longer needed. About 1% of people worldwide (65 million) have epilepsy, [6] and nearly 80% of cases occur in developing countries. [3] Epilepsy becomes more common as people age
