Edison would know AC wins

Welcome to the most exciting and important marketplace since the computer revolution began 35 years ago.

And congratulations on your first personal computer.

Putting real computer power in the hands of the individual is already improving the way people work, think, learn, communicate and spend their leisure hours.

Computer literacy is fast becoming as fundamental a skill as reading or writing.

When we invented the first personal computer system, we estimated that over 140,000,000 people worldwide could justify the purchase of one, if only they understood its benefits.

Next year alone, we project that well over 1,000,000 will come to that understanding. Over the next decade, the growth of the personal computer will continue in logarithmic leaps.

We look forward to responsible competition in the massive effort to distribute this American technology to the world.

And we appreciate the magnitude of your commitment.

Because what we are doing is increasing social capital by enhancing individual productivity.

Welcome to the task.

iApps for Yale Key West Med Students! Elite MD's Teaching without getting a Apple Paten on the Rx Overnight Miracle Cures! A morcellator is a surgical instrument used for division ("morcellation") and removal of large masses of tissues during laparoscopic surgery. [1] It can consist of a hollow cylinder that penetrates the abdominal wall, ending with sharp edges[1] or cutting jaws, through which a grasper can be inserted to pull the mass into the cylinder to cut out an extractable piece.

When freed 1,001 Invention Projects on a CD and my web page

WHY did Pam leave out reinvent the morcellator so it will not sliced into tumors... more common than many experts had previously thought, a conclusion that is likely to fuel calls to limit or eliminate the procedure. When the morcellator sliced into tumors they and their doctors did not know existed (Why?) and spread cancer cells through the abdomen. this fuels calls to limit or eliminate the procedure, New York Times-by Pam Belluck didn't write No One fuels the call to reinvent the morcellator to "Observe" the undiagnosed tumors! Wow... would some MD rewrite this for the NY Times?

7-23-14 New York Times

From

7-23-14 Anti-Tank Heat-Seeking Missile Detector Used to Spot Early Malaria in Single Red Blood Cells

7-23-14 Anti-Tank Heat-Seeking Missile Detector Used to Spot Early Malaria in Single Red Blood Cells, the synchrotron light source and detectors used in the experiment, to Spot Early Malaria in Single Red Blood Cells cost \$777 Trillion and take MIT people off "War Toys."

When freed 1,001 Invention Projects on a CD and my web page

7-23-14 The Javelin anti-tank missile system is a killer weapon that seeks out and destroys armored vehicles, but it has now been successfully used to hone in on the malaria parasite. The system uses a Focal Plane Array (FPA), a heat seeking Fourier Transform Infrared (FTIR) spectroscopy

detector that was specifically developed to target tanks. By combining this device with a synchrotron light source and an infrared microscope, Australian researchers from Monash University and University of Melbourne have been able to spot malaria in a single red blood cell even during the parasite's early stages of development.

7-23-14 The test looks for light signatures of lipids that are correlated to the different stages of malaria present within a cell. The test takes only four minutes to perform and doesn't require a specialist to interpret the results, but don't expect to see repurposed Javelins in your clinic any time soon: the synchrotron light source and detectors used in the experiment are not cheap.

non-coding RNA.

7-21-14 "The Sun Also Rises." The novel ends with Jake and Brett in a taxi speaking of the things that might have been... Until recently, almost all genetics research has focused on about two-percent of the human genome, the portion responsible for directly creating proteins. Now, a Yale researcher will direct a new center studying how the remaining 98 percent can be leveraged to develop new cancer treatments. On July 1, Frank Slack, a professor of molecular, cellular, and developmental biology, became director of the Institute for RNA Medicine (iRM) at The Cancer Center at Beth Israel Deaconess Medical Center in Boston. Slack and his students will move from Yale to iRM, which will aim to create new medications and diagnostic tools by studying non-coding RNA. "If you can have people with many different areas of expertise in the same proximity, people have joint meetings, write for joint grants, and just sort of generally push the science forward in a more expedited way," Slack said. The new lab will start with three principle investigators, and Slack said he hopes to hire about one more researcher per year over the next decade, in addition to raising funds and establishing ties with the pharmaceutical industry. Though Slack has left Yale and is now a professor at Harvard Medical School, he said research partnerships with colleagues at Yale will continue. RNA was long thought of as a biological intermediate: DNA codes for RNA, and RNA carries that code to make proteins in the body. Research has shown only a small portion of the genome serves this process, with a significant portion coding for RNA that does not eventually lead to protein formation. Recent study has revealed diverse functions for such non-coding RNA, such as guiding proteins, regulating their expression, and otherwise shaping biological function. Since most pharmacological agents work by targeting proteins, Slack said these functional RNA could represent a new frontier both for cancer research and other biomedical fields. "With some luck, if the trends continue, this sort of research looks like it will be leading to new therapeutics and diagnostics," Slack said. Slack joined the Yale faculty in 2000.

Slack and his students will move from Yale to iRM, which will aim to create new medications and diagnostic tools by studying non-coding RNA.

7-21-14 "The Sun Also Rises." The novel ends with Jake and Brett in a taxi speaking of the things that might have been... The most famous running of the bulls is that of the eight-day festival of Sanfermines in honor of Saint Fermin in Pamplona. Saturninus (in France "Saint Saturnin") was the first bishop of Toulouse, where he was sent during the "consulate of Decius and Gratus" (AD 250). He was martyred significantly by being tied to a bull by his feet and dragged to his death... This festival was brought to literary renown with the 1926 publication of Ernest Hemingway's novel The Sun Also Rises. The novel is a roman à clef; the characters are based on real people of Hemingway's circle, and the action is based on real events. In the novel, Hemingway presents his notion that the "Lost Generation", considered to have been decadent, dissolute and irretrievably damaged by World War I. The novel ends with Jake and Brett in a taxi speaking of the things that might have been.

7-21-14 "The Sun Also Rises." The novel ends with Jake and Brett in a taxi speaking of the things that might have been... Until recently, almost all genetics research has focused on about two percent of the human genome, the portion responsible for directly creating proteins. Now, a Yale researcher will direct a new center studying how the remaining 98 percent can be leveraged to develop new cancer treatments. On July 1, Frank Slack, a professor of molecular, cellular, and developmental biology, became director of the Institute for RNA Medicine (iRM) at The Cancer Center at Beth Israel Deaconess Medical Center in Boston. Slack and his students will move from Yale to iRM, which will aim to create new medications and diagnostic tools by studying non-coding RNA. "If you can have people with many different areas of expertise in the same proximity, people have joint meetings, write for joint grants, and just sort of generally push the science forward in a more

expedited way," Slack said. The new lab will start with three principle investigators, and Slack said he hopes to hire about one more researcher per year over the next decade, in addition to raising funds and establishing ties with the pharmaceutical industry. Though Slack has left Yale and is now a professor at Harvard Medical School, he said research partnerships with colleagues at Yale will continue. RNA was long thought of as a biological intermediate: DNA codes for RNA, and RNA carries that code to make proteins in the body. Research has shown only a small portion of the genome serves this process, with a significant portion coding for RNA that does not eventually lead to protein formation. Recent study has revealed diverse functions for such non-coding RNA, such as guiding proteins, regulating their expression, and otherwise shaping biological function. Since most pharmacological agents work by targeting proteins, Slack said these functional RNA could represent a new frontier both for cancer research and other biomedical fields. "With some luck, if the trends continue, this sort of research looks like it will be leading to new therapeutics and diagnostics," Slack said. Slack joined the Yale faculty in 2000.

7-21-14 "The Sun Also Rises." The novel ends with Jake and Brett in a taxi speaking of the things that might have been... The most famous running of the bulls is that of the eight-day festival of Sanfermines in honor of Saint Fermin in Pamplona. Saturninus (in France "Saint Saturnin") was the first bishop of Toulouse, where he was sent during the "consulate of Decius and Gratus" (AD 250). He was martyred

significantly by being tied to a bull by his feet and dragged to his death... This festival was brought to literary renown with the 1926 publication of Ernest Hemingway's novel *The Sun Also Rises*. The novel is a roman à clef, the characters are based on real people of Hemingway's circle, and the action is based on real events. In the novel, Hemingway presents his notion that the "Lost Generation", considered to have been decadent, dissolute and irretrievably damaged by World War I. The novel ends with Jake and Brett in a taxi speaking of the things that might have been.

"The Sun Also Rises." The novel ends with Jake and Brett in a taxi speaking of the things that might have been... Verizon FiOS services are delivered over a fiber-to-the-premises network using passive optical network technology. Voice, video, and data travel over three wavelengths in the infrared spectrum. To serve a home, a single-mode optical fiber extends from an optical line terminal at a FiOS central office out to the neighborhoods where a passive optical splitter fans out the same signal on up to 32 fibers, thus serving up to 32 subscribers. At the subscriber's home, an Optical Network Terminal (ONT) transfers data onto the corresponding in-home copper wiring for phone, video and Internet access. [18] Older FiOS installations mount the ONT inside the house and use Category 5 cable for data and coaxial cable for video, while newer markets mount the ONT outside the house and use Multimedia over Coax Alliance (MoCA) protocol for both data and video over a single coaxial cable. Voice service is carried over the existing telephone wires already in the house. One of the three wavelength bands is devoted to carrying television channels using standard QAM cable television technology. The other two wavelengths are devoted to all other data, one for

outbound and the other for inbound data. This includes video on demand, telephone and Internet data. This allocation of wavelengths adheres to the ITU-T G.983 standard, also known as an ATM passive optical network (APON). Verizon initially installed slower BPONs but now only installs GPONs specified in the ITU-T G.984 standard. These bands and speeds are: 1310 nm wavelength for upstream data at 155 Mbit/s (1.2 Gbit/s with GPON) 1490 nm wavelength for downstream data at 622 Mbit/s (2.4 Gbit/s with GPON) 1550 nm wavelength for QAM cable television with 870 MHz of bandwidth The set top box (STB) receives IR code and channel subscription information through the out-of-band (OOB) channel just as other coax or RF-based STB's do. However, guide data, cover art, widgets and other data are sent via IP over the data channels. All upstream OOB requests (or responses) are sent via IP over the data channels. All non-OOB data transactions to or from STB's are carried over the MoCA channels. The MoCA channel is also used to carry out inter-STB transactions (multi-room DVR, synchronization, etc.). FiOS is also compatible with CableCard technology allowing FiOS TV subscribers to receive encrypted and premium cable channels on CableCard capable devices
